Situation Awareness Brief

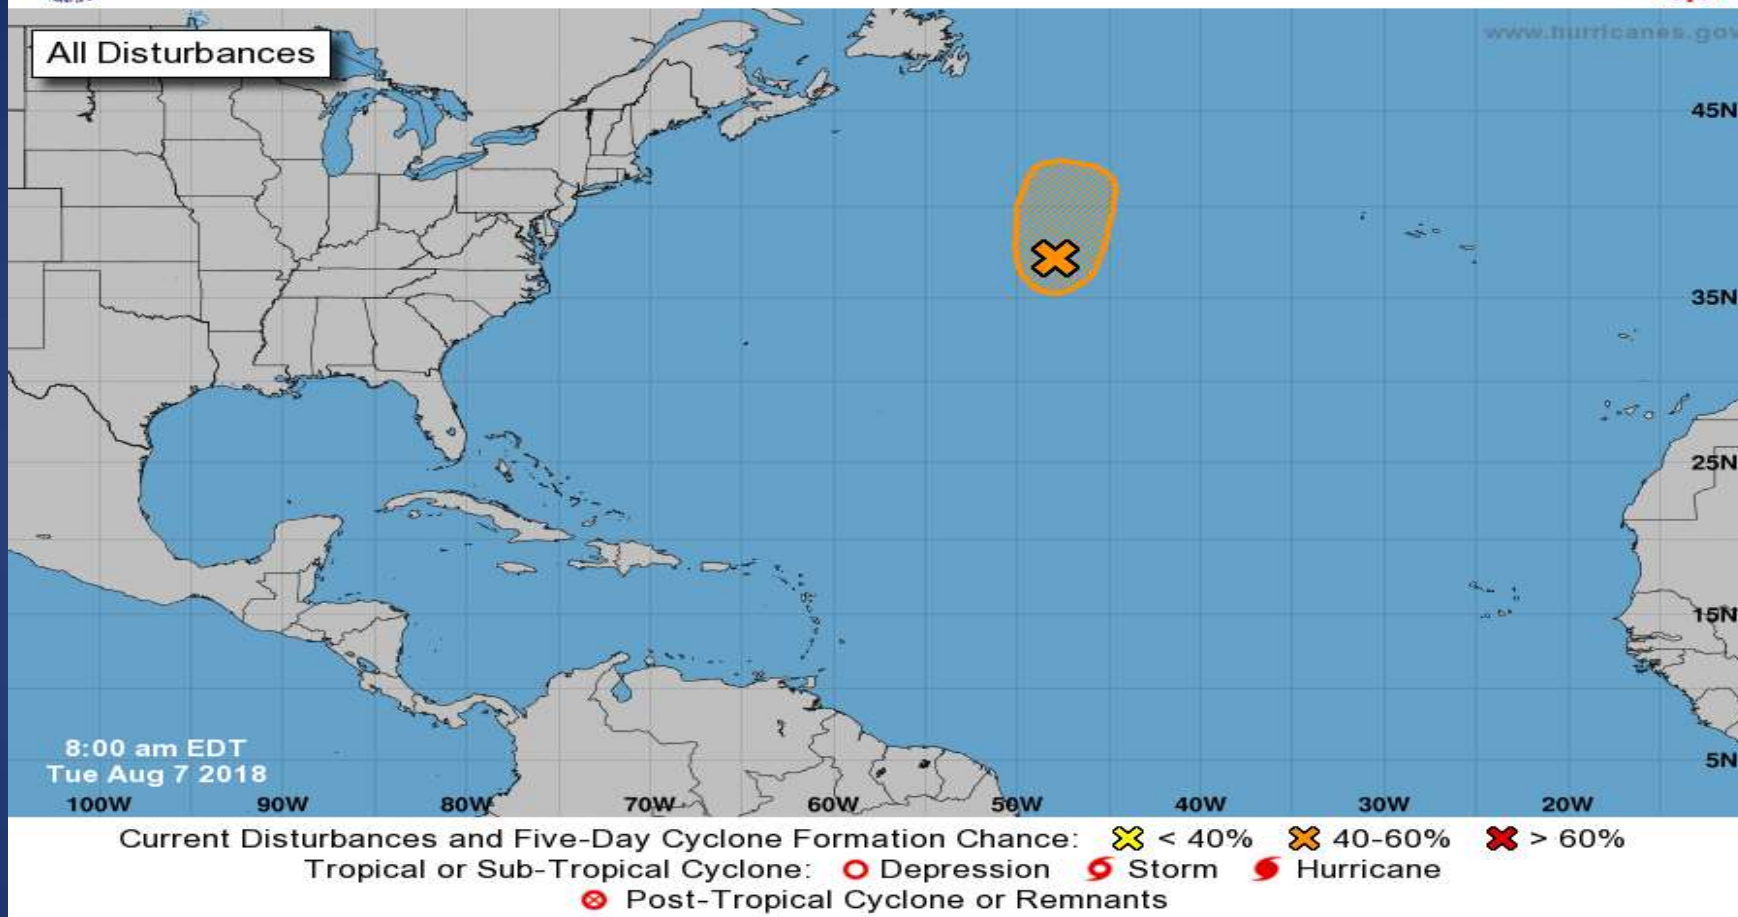

Tuesday, August 7th 2018
As of 0900 CST

Tropical Weather Awareness

Five-Day Graphical Tropical Weather Outlook National Hurricane Center Miami, Florida

Early visible satellite images indicate that the shower activity associated with a non-tropical low pressure system located a little more than 900 miles west-southwest of the Azores continues to show some signs of organization. Although the shower activity has decreased somewhat during the past few hours, this system could still acquire subtropical or tropical characteristics later today. By Wednesday, however, the low will encounter increasingly cooler waters, which will hinder development while the system moves toward the north-northeast over the open North Atlantic. Additional information on this system can be found in High Seas Forecasts issued by the National Weather Service

Incidents Reported to the State Operations Center (last 24 hours)

DATE	EVENT / INCIDENT	LOCATION (City/County)	Final Report: Y/N
08/06/18	Silver Alert Continuation	Dallas / Dallas County	N

Hazardous Weather

Hazardous Weather

Persistent upper level low over the Arklatex will keep instability and deep moisture across the area. This combined with afternoon heat and sea breeze will help to develop scattered showers and thunderstorms area-wide. Highs will be in the upper 80s to lower 90s with Southeast to South winds at 5 mph

Widely scattered showers and isolated thunderstorms are expected today, mainly this morning. Temperatures will once again top off near to slightly below normal. Mariners will find a light chop building to a moderate chop on the bay with Gulf seas of 2-4 feet.

Hazardous Weather

Thunderstorm Potential Tonight

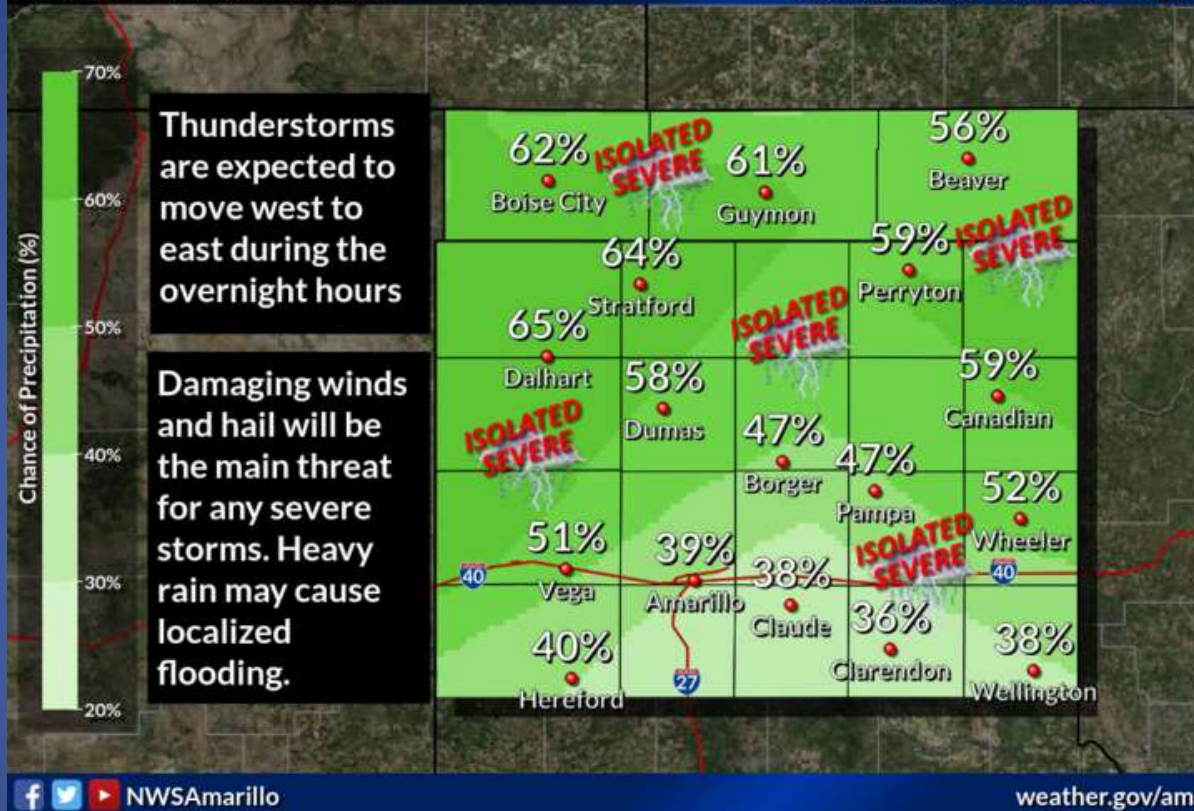

Weather Forecast Office

Amarillo, TX

Issued Aug 07, 2018 7:16 AM CDT

A chance of isolated severe storms

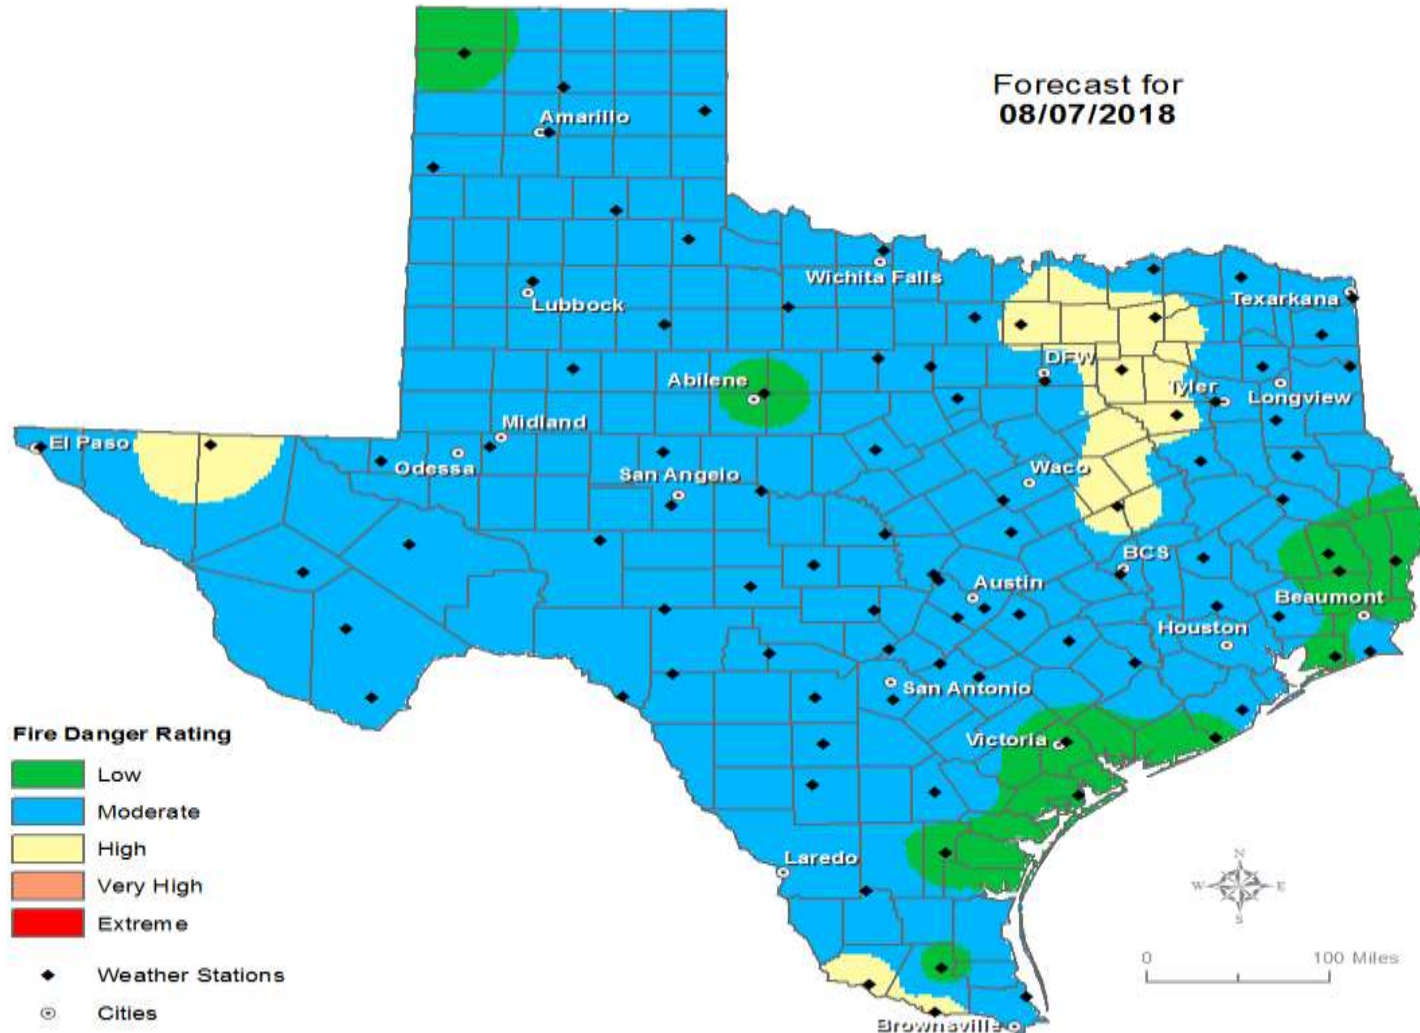

Thunderstorms are expected tonight across the Panhandles. Main threats include damaging winds and hail for any severe storms. Heavy rain may cause localized flooding.
